

Technical Bulletin.

Correct fitment of inner and outer pads when fitted with different size or type of backplate spring.

Brake Pads with inner and outer pads are often fitted with a different size or type of backplate spring.

The inner and outer pads are not interchangeable.

Care must be taken to identify and fit the correct pad to both the inner (piston side) and outer side of the caliper.

Failure to observe this will result in serious brake noise.

Pads affected include: **PAD1062**
 PAD1109
 PAD1420
